

MASON SKOGLUND

Minooka, IL | 630-768-2442 | masonskogs23@gmail.com

PROFESSIONAL OBJECTIVE

Computer Science student seeking a software engineering internship to apply experience with C, C++, Java, Python, Git, algorithms, data structures, and software development. Brings hands-on project experience with file processing, object-oriented programming, data structures, testing through program validation, and collaborative problem solving, with an interest in developing practical software solutions.

EDUCATION

Bachelor of Science in Computer Science, North Central College, Naperville, IL Expected May 2028

Associate of Science in Computer Science, Joliet Junior College, Joliet, IL May 2026 | GPA: 3.35

EXPERIENCE

Specialty Sales Team Member, Target, Shorewood, IL August 2026 – Present

- Assist guests with product selection and provide professional service in specialty sales areas.
- Maintain organized, well-stocked sales areas while following operational and quality standards.
- Collaborate with team members to respond to guest needs, complete daily tasks, and maintain an efficient environment.
- Adapt to changing priorities and high-volume periods while maintaining accuracy and professionalism.

Bottle Filler, Tri-State Propane Exchange, Minooka, IL June 2023 – 2026

- Operated propane filling equipment while maintaining compliance with safety regulations and company procedures.
- Collaborated with team members to streamline filling processes, improve efficiency, and reduce downtime.
- Trained new staff on safety protocols, equipment operation, and standard operating procedures.
- Assisted customers with propane-related questions and resolved concerns while maintaining professional service.

PROJECTS

Vehicle Management System — Java (Binary Search Tree)

- Developed a vehicle management application using a Binary Search Tree to organize and store vehicle records.
- Implemented vehicle insertion, VIN-based searching, and in-order traversal to manage and validate inventory data.
- Applied object-oriented programming with Vehicle, Car, and Truck classes and implemented file input processing.

Vehicle Management System — Java (Linked List)

- Developed a vehicle management application using a custom linked-list data structure with LLNode objects.
- Implemented insertion, VIN-based searching, and deletion operations while validating program behavior through testing.
- Applied object-oriented programming by storing Vehicle objects within dynamically linked nodes.

Movie Tracking System — C

- Developed a menu-driven movie tracking application using structures and binary file storage.
- Implemented add, delete, display, and update operations using sequential and random file access with fread, fwrite, and fseek.

Inventory Management System — Python

- Developed a menu-driven inventory application using parallel lists, functions, and sentinel-controlled while loops.
- Implemented file-based workflows to read and write inventory records and calculate total inventory value.

Grade Tracker — C++

- Developed a grade-tracking program with input validation, sentinel-controlled loops, and modular functions.
- Implemented functions to validate grades, calculate averages, and display results.

HONORS AND AWARDS

- Graduated With Honors, Joliet Junior College — May 2026

SKILLS

Programming: C, C++, Java, Python, SQL | **Data/Concepts:** Data Structures, Algorithms, Object-Oriented Programming

Tools: Git, GitHub, Visual Studio Code, CLion, PyCharm, IntelliJ IDEA
